UpToDate

Access to Uptodate Anywhere

Uptodate Anywhere is a clinical decision support system based on the current medical evidence with a view to answer clinical questions quickly and easily at point of care.

Registered library members can access Uptodate Anwhere in three different ways as follows:

Instant access from a work PC

Go straight to Uptodate Anwhere (no password needed) and start searching using the internal link via the A to Z on the intranet or by clicking on the icon below (internal link).

Username/Password access from home

Staff and students can also access the resource from home. Please note: You can only do this using the internal link page above. When this has loaded click on the 'Login/Register' link to the top right of the page and choose 'Register Now'. Input your details and choose a username and password to complete the registration process.
From home you will now be able to use Uptodate at www.uptodate.com

Mobile App

The Uptodate Anywhere app cannot be downloaded from the app store. If you wish to use this you will need to set up Username/Password access from home as above. When you complete this process you will receive a confirmation email that includes a link and instructions for setting up the mobile app.

Reverifying your account

You will be prompted to reverify your Uptodate account every three months. This is a security measure to ensure access is retained only by eligible members. To reverify your account click on the instant access from a work pc icon above and log in at the top right with your Uptodate username/password. You will be presented with a confirmation pop-up and once this has been

confirmed reverification is complete. Once the account has been reverified any mobile devices associated with your login will automatically be updated.

If the confirmation pop-up does not show this may have been blocked on the computer you are using. Contact the library for help.

Note: You cannot reverify using an iPad, mobile device or external computer
